

C-COR Broadband is an accredited Incognito Partner for over 10 years. Solutions have been successfully deployed in Australia, NZ and across Asia Pacific.

Incognito Software is a world class global provider of Broadband Software Provisioning and Activation solutions that help monetise IP-based subscriber and commercial services. In excess of over 160 million subscribers provisioned across all network architectures and technologies.

Key Areas of Incognito Portfolio

- Device Provisioning (DHCP and TR-069)	BCC / ACS
- IP and DNS Address Management	AC / NC
- Diagnostics, Monitoring and Reporting	BAR
- Service Activation	SAC

BCC (Broadband Command Center)

- Service Provider grade DHCP Management component
- Network agnostic device provisioning of HFC Cable devices
- Supports IPv6, TR-069, DOCSIS, PacketCable and SIP
- MAC-less Provisioning option (e.g. Uni-V)

ACS (Auto Configuration Server)

- End-to-end TR-069 service fulfillment and device provisioning
- Manage devices and services over xDSL, PON, FTTH, LTE

AC (Address Commander)

- Manage requests for IPv4/IPv6 network allocation
- Network Discovery – subnets, IP addresses etc.
- Customised Reporting re IP Address Allocation

BAR (Bandwidth Activity Reporter)

- Collects, processes and presents IPDR data
- Identifies Bandwidth Congestion
- Provides Usage Intelligence for Capacity Planning
- Optimised Broadband Network Management

NC (Name Commander)

- Centralised Management of all DNS records and BIND options
- Ensures Data Integrity

Other

- Integration via Northbound gateway to NMS, Billing etc via SOAP API
- C-COR have deployed BCC, ACS and AC systems in Australia and in Asiapac
